This three-bedroom plan makes the most efficient use of its 988 square feet of living area. The kitchen and dining area are combined with immediate access from

the side door. This makes it easier for the wife to bring her groceries right into the kitchen and put them away.

Directly behind the kitchen is the bathroom. Its position allows for a minimum of plumbing. Also, placed adjacent to the bathroom is the water heater, linen closet, and washing machine.

The heating is provided by a perimeter duct system fed by a plenum directly beneath the centrally located heater. At the owner's option a conventional ceiling duct system can easily be used, which provides a minimum of duct work.

The bedrooms are large enough for double beds or, if single or twin beds are used, adequate space is allowed for desks and bureaus. Ample closet space is provided in each room.

The living room is accessible from all parts of the house yet remains separate for entertainment. In addition, the roof has a continuous screened soffit vent to provide roof ventilation.
